WHY YOU SHOULD "POT" ELECTRONIC ACCESS CONTROL EQUIPMENT

By Scott Lindley
General Manager, Farpointe Data
As seen on SDM

No longer do security providers face the problems that used to be inherent with mechanical hardware. Moving parts become fatigued. Electric products don't wear out. But, today, with electronic, solid-state computer peripherals, they nonetheless still have their issues, albeit new ones. Moisture, insulation and vibration, among other variables, can cause false alarms as well as damaged results and other failures.

The big question for manufacturers of security equipment is how can they eliminate costly repairs or replacements for their end users and help their integrators avoid annoying service calls.

Put Your Readers and Credentials to Work for You

Cards, tags and readers are often the only components of your access control system most end-users see. Shouldn't they reflect your brand? Private-labeled access control readers and credentials from Farpointe Data can help build your business.

- Promote your business
- Encourage reorders
- Generate new leads

Contact Farpointe's Customer Support team for details on private-labeling readers and credentials.
