REVOLUTIONIZING PHYSICAL IDENTITY AND ACCESS MANAGEMENT

Patrick Wimmer, Joey Yanire and Carl Fenger, at LEGIC Identsystems, explain how smartphones can unlock new potential in access management.

By Victoria Rees
Editor, SJA
As seen in **_Security Journal Americas_**

In today's digital landscape, smartphones have evolved into essential multifunctional tools, serving as central hubs for everyday tasks such as payment, identification, health monitoring and communication.

The integration of access management with smartphones represents a pioneering breakthrough in the realm of Physical Identity and Access Management (PIAM), transcending the constraints associated with conventional mechanical keys and plastic keycards, which are frequently lost, misplaced, forgotten, copied or stolen.

A Responsible and Relevant Solution to Proximity Vulnerabilities

By Stephen "Shep" Sheppard
Regional Sales Manager North and Key Accounts

With easy availability of hacker card sniffers, such as the Flipper Zero, attention is being given to the vulnerabilities of 125-kHz proximity technology. The fact is though, there is a lot of proximity deployed—and still being deployed—in electronic access control systems. This raises a question: can systems that depend on this technology be made more secure in an efficient and cost-effective way?
