# ELEVATING SECURITY: THE CLOUD'S ROLE IN ACCESS CONTROL EVOLUTION

Experts agree that we're over the cloud-based access control adoption hump. Though some continue to lag behind, they also say there's plenty of opportunity for growth in integration and managed services.

By Chris Crumley, SDM Associate Editor
As seen on **SDM**

Cloud-based access control systems—or hybrid access control systems that may communicate with the cloud rather than operating solely in the cloud—have been available for quite some time now, but there continues to be some trepidation toward adopting cloud-based solutions. According to industry experts SDM spoke with, attitudes toward cloud-based solutions have changed to the point where it would be remarkable if a customer wasn't somewhat interested in a cloud-based solution. Still, there exists some lag in the technology's adoption.

Product Spotlight: Keypad Readers

Keypad readers can add an extra layer of security to access control applications using two-factor authentication: reading a physical or mobile credential, as well as accepting a PIN.

Keypad Features:
- Capacitive, non-mechanical, solid-state keypads have no moving parts.
- Individual key presses are indicated by audible beep and LED flash.
- 5-key stays backlit for easier orientation in low-light conditions.
- Keypad remains backlit for approx. 20 seconds after key press or credential presentation.
- Fully potted and IP67 code rated, for installing indoors or out.
- 3×4 and 2×6 models for mounting to single-gang wall boxes or mullions.
- Supports leading RFID and mobile credential technologies.
- Limited lifetime warranty.
