BALANCING RISKS IN ELECTRONIC ACCESS CONTROL

Understanding and mitigating the challenges posed
by legacy 125-kHz proximity installations

By **Scott Lindley**
General Manager, Alvarado and Farpointe Data

Recent industry reports indicate a significant amount of 125-kHz proximity technology is deployed—and still being deployed—in electronic access control applications. Given the rise in discussions around cybersecurity threats, what accounts for proximity's continued use?

The P-300 Cascade—part of the *Pyramid Series Proximity*® line of 125-kHz proximity readers—boasts a read range of up to 5 inches (126 mm). Fully encapsulated in weather- and tamper-resistant epoxy potting, it can be installed with confidence indoors or out. Further, the compact P-300 mounts to flat surfaces including metal mullions, supports today's most popular credential protocols, can be custom branded, and is backed by Farpointe's limited lifetime warranty.

This P-300—spotted at an apartment in San Francisco, California—is part of an access control system from our friends at Mircom.
